

Prefab KAFOs can only be ordered directly with Anatomical Concepts Inc.

•Email: info@anatomicalconceptsinc.com
•Web: www.anatomicalconceptsinc.com

Fax completed form to (800)657-7236 or E-mail to info@anatomicalconceptsinc.com

*ALL PATIENT INFO FOR EACH SECTION MUST BE COMPLETED TO AVOID ORDER DELAYS

It is highly recommended to call our ABC Certified practitioners to answer any unique or specific design questions before submitting your order.

Example KAFO System

CLINICAL/DESIGN CRITERIA NOTES

(Additional Charges May Apply) Full KAFO systems are only available with Black Terrycloth liners.

* SECTION 3 ANKLE FOOT ORTHOSES - FUNCTIONS & OPTIONS

Standard Orthosis

Custom-contoured, malleable aluminum heel connector for controlling dorsi/plantar flexion

DDA Orthosis

Designed to dynamically stretch the gastroc muscles, offsetting equinus contracturing. The use of a series of posterior articulations allows for a virtual unrestricted range of plantar or dorsiflexion. Provides nearly unlimited inversion or eversion of the ankle/foot complex.

APU/TERRA Orthosis

Sagittal plane adjustability for dorsi/plantar flexion of the ankle/foot complex
PDAC Approved L1971 (Ambulatory)

Tri Planar Orthosis

Adjustability for dorsi/plantar flexion, varus/valgus, and internal/external rotation of the ankle/foot complex all in one

RIBBY Orthosis

Free dorsi / plantar stop & the ability to lock out at 90°
PDAC Approved L1971 (Ambulatory)

DUAL/ABBY Orthosis

Adjustability for dorsi/plantar flexion and varus/valgus all in one heel connector system
PDAC Approved L1971 (Ambulatory)

ADDITIONAL OPTIONS

Quick Disconnect.

KO and/or AFO can be interchanged or used independently as patient needs dictate. Cannot be used with our DDA AFO. Suggested Add-on code: L2768

Plastic Shells for AFOs.

(Recommended for mild fracture management)

* SECTION 4 KNEE ORTHOSES - FUNCTIONS & OPTIONS

PENTAGON

The Pentagon® Orthosis is a unique posterior fitting, single-jointed upright knee orthosis. This system allows for a simplified fitting of the knee orthosis that helps address many different rehabilitative needs for sagittal plane stabilization. The Pentagon® Orthosis design can address up to five different mechanical knee functions (Free Motion, Drop Lock, Variable ROM, Ratchet Lock and Lock Out).

PDAC APPROVED
L1843

KMO

KMO V/V (varus/valgus)

The KMO™ (Knee Management Orthosis) is a more accurate alternative for static progressive positioning of the knee. The KMO™ has the ability to more effectively position the normal anatomical alignment of the patient's knee joint which can easily be set in position without the need to heat or contour the upright in order to accommodate or progressively improve knee contracture issues, specific post-op Range of Motion positioning needs or minor fracture stabilization.

KMO OPTION

KMO plastic shells.
(Recommended for mild fracture management)

PDAC APPROVED
L1831
